Short Science Fiction Collection 049

Science fiction is a genre encompassing imaginative works that take place in this world or that of the author's creation where anything is possible. The only rules are those set forth by the author. The speculative nature of the genre inspires thought, and plants seeds that have led to advances in science. Many people chose to become scientists because science fiction sparked their interest. It is a playing field to explore social perspectives, predictions of the future, and engage in adventures unbound into the richness of the human mind. (Summary by Amy Gramour)
